

CS 4342 Homework 1

| n | trainingAccuracy on first n examples | testingAccuracy |
|------|--------------------------------------|-----------------|
| 400 | 0.8275 | 0.711159 |
| 800 | 0.8025 | 0.7407 |
| 1200 | 0.79833 | 0.74945 |
| 1600 | 0.78875 | 0.763676 |
| 2000 | 0.7825 | 0.76422 |

Accuracy Comparison

Here, the training accuracy is clearly decreasing as a function of n . On the other hand, the testing accuracy is increasing as a function of n .

The two curves show opposite behavior but as the value of n increases, they tend to intersect and maybe overlap.

The best 5 features are visualized here:
